

A high performance formaldehyde free biocide

BIOCURE is a high performance formaldehyde free biocide specifically produced for post / tank side treatment of formaldehyde free coolants.

BIOCURE has been developed to effectively treat coolant emulsions where Bacterial / Fungal spoilage as occurred maintaining the level of bacteria to within HSE guidelines. Biocure has a broad spectrum of activity against bacteria, mould fungi and yeasts

BIOCURE should be used at a treat rate of 0.20% to 0.40%. To ensure that maximum antimicrobial efficacy is achieved with the lowest possible concentration, Biocure must be distributed homogeneously into the emulsion with effective stirring.

BIOCURE is free of chloromethylisothiazolone, formaldehyde, formaldehyde denors and other aldehydes

Typical properties

Density @ 20°C	Approximately 1.00 g/ml
Boiling Point °C	Approximately 100°C
Flash point °C	>100 °C
pH Value (Concentrate)	8-9
Odour	Amine like
Appearance	Light yellow - orange
Solubility	Fully soluble in water

Use biocides safely. Always read the label and product information before use.

Refer to the Safety Data Sheet before using this product.
